

DO YOU LIVE OR WORK IN NORTH CENTRAL OR NORTHWEST NORTH DAKOTA?

US Air Force facilities are located in this region, and may be located on your land, or land where you are working.

Become familiar with the following facilities and related restrictions:

Missile Launch Facilities are underground vertical containers (silos) for the storage and launching of intercontinental ballistic missiles (ICBMs). Missile launch facilities are protected by 1,200 foot easements that only allow agricultural and related activities. These easements do not allow the construction of residential, commercial, communication, or industrial structures. In the event of an emergency, the US Air Force will work with local emergency responders to evacuate an area of 2,500 feet around the missile launch facilities. It is not advisable to construct residential structures or other structures in this area that may involve large congregations of people.

Missile Alert Facilities command, control, and monitor the missile launch facilities.

If you suspect you might be building near a missile launch facility or missile alert facility, please call **Minot Air Force Base Public Affairs at (701) 723-6212**, or visit: <https://www.minot.af.mil/Contact-Us/>

HICS (Hardened Intersite Cable Systems) are buried copper cables that function as a part of the missile launch facilities. HICS are protected by 16.5 foot easements. Because of their age, some cables may be close to the surface. **Always use ND One Call/811 prior to ANY ground disturbing activity.** ND One Call includes the US Air Force in their notifications. Visit: <http://www.ndonecall.com>
